OFFICIAL PRODUCT REQUIREMENT DOCUMENT

Meeting Mind: Master Specification

Stack: MERN (MongoDB, Express, React, Node) + Socket.io + Framer Motion + BullMQ

1. Role: Admin (System Level)

Managed by the platform owner. Responsible for organization onboarding and system health.

SCREEN: **Admin Dashboard**

Description: The command center for the entire SaaS platform.

Features: KPI boxes for Total Organizations, Active Meetings, Global Scribes, and Monthly Growth chart.

SCREEN: **Organization Management (CRUD)**

Description: A tabular interface to manage b2b clients.

Workflow:

1. Admin clicks "Create Organization" button.
2. Form pops up requesting Name, Domain, and Admin Email.
3. System validates if email is unique.
4. **On Submit:** Backend creates the Org record and User record.
5. System auto-generates a secure 12-character password.
6. Nodemailer sends a "Welcome to Meeting Mind" email with the Credentials.

2. Role: Organization / Organizer

The main business user who schedules meetings and manages the scribe pool.

SCREEN: **Organization Dashboard**

Features: Timeline of "Today's Meetings", Scribe Availability status indicators, and Recent Feedback summary.

SCREEN: **Meeting Creation Center (RND: Recursive Logic)**

Description: Advanced form for scheduling complex meeting series.

CORE LOGIC

Workflow:

1. Enter Meeting Title and Topic.
2. Select a **Global Scribe** from the dropdown list.
3. Add Attendee emails (comma-separated or chip-input).
4. **Recursive Booking:** Click the "Recursive" checkbox.
5. Select "Saturday" (or multiple days) and set a "Limit Date" (e.g., 3 months).
6. **System Action:** The backend calculates every Saturday between `now` and `limitDate`.
7. Bulk-creates multiple `Meeting` entries in the DB.
8. BullMQ schedules reminders for each instance individually.

SCREEN: **Professional Calendar Interface**

Description: A high-end visual representation of scheduled meetings.

Features: Multi-view (Month/Week/Day). Clicking a day provides a drawer listing all meetings. Clicking a meeting shows the assigned Scribe and invited Attendees.

3. Role: Notes Writer / Scribe

The specialist responsible for capturing the meeting's intellectual capital.

SCREEN: **Scribe Dashboard**

Features: "Join Now" button for meetings starting within 10 minutes. Archive search for previous sessions.

SCREEN: **Live Meeting Canvas (The Canvas Engine)**

Description: An interactive, real-time board for transcription.

The Workflow:

1. Scribe enters the current "Meeting Topic" first to set context.
2. **Canvas Interaction:** Attendee cards float on a grid background. Scribe can drag cards to organize the board.
3. **Note Taking:** Scribe clicks an Attendee's Card. A smooth animation zooms into that card and opens a text field.
4. Scribe types what the attendee is saying. Data is emitted via Socket.io instantly.
5. **History Peek:** Scribe clicks "Show Previous Session" to overlay the notes from the last recurring meeting in a semi-transparent side panel.
6. **Dispute Handling:** If a card pulses red, the scribe clicks it to see the "Correction Flag" from the attendee and edits the note accordingly.

4. Role: Attendee / Participant

The contributors of opinions and feedback.

SCREEN: **Attendee Dashboard**

Features: Large, clear cards for upcoming meetings. "My Action Items" global list compiled from all sessions.

SCREEN: **Live Participation Room**

Description: Real-time feed of the meeting progress.

Workflow & Interaction:

1. Attendee sees live comments from the Scribe appearing under different attendee names.
2. **Validation:** Find their own comments. If wrong, click "Flag for Correction".
3. **Privacy:** Click "Remove my Name" if they want an opinion to be anonymized or detached.
4. **System Alert:** Action triggers a Socket event notifying the Scribe and Organizer immediately.

SCREEN: **Post-Meeting Anonymous Feedback**

Description: Simple rating form triggered 5 minutes before end-time.

Logic: Feedback is stored without a `userId`. Admin/Org view strips any feedback containing slang via the Backend Profanity Filter.

5. Technical Implementation Details

```
// Socket.io Room Logic io.on('connection', (socket) => { socket.on('join_meeting',
(meetingId) => { socket.join(`meeting_${meetingId}`); }); socket.on('scribe_input',
(data) => { io.to(`meeting_${data.meetingId}`).emit('live_note', data); }); });
```

Reminder System: BullMQ job with 1,800,000ms (30m) delay based on the meeting timestamp. Email is fired via a recurring worker.
